

Electric Parking Brake Instructions

Electric parking brake

The system provides, in automatic operation, for the application of the parking brake on switching off the engine and its release as the vehicle moves off.

The driver can take over at any time to apply or release the parking brake, by operating the control lever:

- by briefly **pulling** the control lever to apply the brake,
- by briefly **pushing** the control lever, while pressing the foot brake, to release it.

Automatic mode is activated by default.

Indicator Lamp

This indicator lamp comes on in the instrument panel and in the control lever to confirm the application of the parking brake

It goes off to confirm the release of the parking brake.

This indicator lamp flashes on the control lever when manual parking brake application or release is performed.

Emergency braking

 The emergency braking should only be used in an exceptional situation.

In the event of a failure of the main service brake or in an exceptional situation (e.g. driver taken ill, under instruction, etc.), a continuous pull on the control lever will brake the vehicle. Braking takes place while the control lever is being pulled. It is interrupted if the control lever is released.

Hill start assist

System which keeps your vehicle immobilised temporarily (approximately 2 seconds) when starting on a gradient, the time it takes to move your foot from the brake pedal to the accelerator pedal.

It is only active when:

- the vehicle is completely stationary, with your foot on the brake pedal,

Safety

If the drivers door is opened without the application of the parking brake a loud audible warning will be given alongside a message on the instrument panel warning the driver to apply the parking brake

Note:

In the event of a battery failure, the electric parking brake no longer works. If the battery fails after the parking brake is applied it will remain in engaged position.

Always refer to the Customer handbook or contact your Peugeot Dealer for advice.
